OCCUPATIONAL HEALTH, SAFETY AND ENVIRONMENT POLICY

As RAS MOBILITE, we operate in the automotive sub-industry sector, designing and manufacturing vehicle interior trim parts, plastic parts, and other supporting products. Our primary goal in carrying out these activities is to act in an environmentally conscious manner, prevent pollution, ensure the health and safety of all our stakeholders, and continuously improve our occupational health, safety, and environmental (OHS) performance.

In this regard;

- To comply with all applicable legal regulations, national and international standards, and other obligations related to occupational health, safety, and the environment,
- To increase the awareness and ensure the active participation of our employees, suppliers, subcontractors, and visitors in occupational health, safety, and environmental issues,
- To adopt a systematic and preventive approach to eliminate hazards, identify risks at their source, and minimize them,
- To manage occupational health, safety, and environmental actions in a planned, traceable, and sustainable manner through digital platforms by continuously monitoring risks and environmental impacts,
- To prevent potential losses by developing systematic approaches to work accidents, occupational diseases, environmental impacts, and emergencies,
- To continuously improve the Occupational Health and Safety Management System (TS ISO 45001) and the Environmental Management System (TS ISO 14001) and integrate new technologies into the systems,
- To use natural resources efficiently, increase energy efficiency, and prevent the use of substances harmful to the environment and human health as much as possible; • Reducing and controlling these substances where their use is unavoidable,
- Encouraging the use of renewable energy sources, regularly monitoring energy performance, continuously improving it, and ensuring full compliance with energy-related legal obligations,
- Reducing water consumption and water footprint, and using water resources sustainably,
- Taking action to prevent soil, water, air pollution and noise pollution,
- Reducing waste generation, energy consumption and environmental impacts by basing all our activities on a life cycle approach,
- Reducing waste at the source by establishing waste management systems, increasing recycling rates and carrying out disposal in an environmentally friendly manner,
- Ensuring the continuous development of HSE systems by creating an environment where our employees and employee representatives can share their views and suggestions,
- Establishing open and transparent communication with relevant individuals, institutions and organizations; We commit to:
- Evaluating complaints and requests and making necessary improvements,
- Developing and supporting social responsibility projects to strengthen our relations with the community, and leading sustainability-oriented activities that will increase social benefit,
- Sharing our HSE policy openly with the public and reviewing and updating it periodically.
